

Kuros Biosciences further strengthens orthobiologics patent portfolio

- **Grant of European patent entitled ‘Osteoinductive composites’**
- **Notice of allowance of Japanese patent from the same patent family**
- **Further strengthens Kuros’s position as a leader in the field of orthobiologics**

Schlieren (Zurich), Switzerland, July 22, 2020 – Kuros Biosciences (SIX: KURN) today announced that its Dutch subsidiary, Kuros Biosciences BV, has been granted the European patent, EP 3268058, entitled ‘Osteoinductive composites’. This patent covers certain combinations of polymers and granular materials and further expands Kuros’s patent portfolio relating to its MagnetOs product line. Kuros has also received notice of allowance of a patent application from the same patent family in Japan.

Kuros has over 20 granted patents and more than 10 patents pending, specifically in the field of bone graft technologies, cementing their position as leaders of innovation in spinal orthobiologics. This granted patent further strengthens Kuros’s orthobiologics patent portfolio and is an important part of the intellectual property protection for the putty formulations of its MagnetOs product line.

MagnetOs Putty is a bone graft in which MagnetOs Granules are premixed with a polymeric binder that facilitates application to simple and complex bony defects in the spine. After implantation, the polymeric binder in the putty is rapidly resorbed, leaving the granules of MagnetOs to guide the three-dimensional regeneration of bone.

Joost de Bruijn, Chief Executive Officer of Kuros, said: “Our mission at Kuros is to eliminate orthopedic non-unions in the spine and improve patient rehabilitation after back surgery. Granting of these patents further demonstrates Kuros’s position as a leader in the field of orthobiologics with innovative spinal products. This intellectual property protection reinforces our strong progress in developing advanced and class leading products and optimizing commercial potential.”

About Kuros Biosciences AG

Kuros Biosciences (SIX:KURN) is focused on the development of innovative products for tissue repair and regeneration and is located in Schlieren (Zurich), Switzerland, Bilthoven, The Netherlands and Burlington, MA, U.S. The Company is listed according to the International Financial Reporting Standard on the SIX Swiss Exchange under the symbol KURN. Visit www.kurosbio.com for additional information on Kuros, its people, science and product pipeline.

About MagnetOs

MagnetOs bone graft has an advanced submicron surface topography that leads to the formation of bone, rather than scar tissue, following implantation. In preclinical models, MagnetOs preferentially directs early wound healing toward the bone-forming pathway, meaning that bone can be formed even in soft tissues without the need for added cells or growth factors, resulting in an osteoinductive claim in Europe. MagnetOs promotes local bone formation equivalent to current gold standard, autograft. A substantial number of

clinically relevant and predictive studies have demonstrated its equivalence to the current gold standard (patient's own bone, which may not be available in sufficient quantities and/or involves morbidity, costs and pain associated with its harvesting from another healthy site of the patient's body). MagnetOs is now supported by over three years' clinical experience since its launch in the United Kingdom in May 2017. For more information, see: www.magnetosbonegraft.com

Forward Looking Statements
